The art of style

Our trend-setting team of designers continually introduces new colors, new styles, and new fabrics, because we know it’s not enough that our products provide the most effective Robotic Massage® on the market. To deserve a place in your environment, our chairs must be great looking as well as therapeutic.

It’s our way of saying we understand what you want.

The science of comfort

Everyone likes to feel good. At Interactive Health® it’s all we think about.

Our team of scientists, researchers, and engineers analyze the treatments used by massage therapists, chiropractors, and physicians, and turn those techniques into the sophisticated Human Touch Technology® mechanisms that animate our family of chairs. By building on our decades of experience as the world leader in massage technology, we consistently produce the most advanced Robotic Massage® systems ever devised.

Inside every iJoy™ Robotic Massage® Chair are the "hands" of a trained massage professional - just waiting to provide you with a soothing back massage. But don't take our word for it. Sit down in one.

Our multi-patent Human Touch Technology® massage system so closely replicates the therapeutic techniques used by back and spinal care professionals that it is the preferred technology of the American College of Chiropractic Orthopedists. It is designed to follow the natural contour of your spine, and move three-dimensionally in four different modes.

iJoy™ 100 does what you tell it. Each of four powerful massage modes can be programmed to give you the touch you prefer. The controller has three different programmed massage sessions of 15 minutes, which means you can kick back and enjoy a programmed massage whenever you feel like it.

Human Touch Technology® starts with a patented mechanism that works like "wrists and arms." We added "hands" - massage rollers that move three-dimensionally on a straight track. The result is a Robotic Massage® that feels remarkably human.
